

What is Ripstop-Nylon?

La Bottega dell'Aquilone Speed Com

Rip-stop Nylon is a **light weight, water repellent nylon fabric** with inter-woven ripstop reinforcement threads in a crosshatch pattern, so the material **resists ripping or tearing**.

Rip-stop is used in parachutes, hot air balloons, kites, light weight camping equipment, flags, banners, indoor and outdoor inflatable structures and many other applications which require a **strong lightweight fabric**.

Rip-stop reinforcement can also be incorporated into heavier fabrics which require **extreme durability** such as those used in the manufacture of luggage.
