

SafetyCell™

- Listen to radio and phone transmissions simultaneously.
- Dial phone normally, talk and listen through headset.
- Provides emergency communications.
- Lightweight and portable.
- Installs in seconds.
- Maintenance free.

SafetyCell™

Connects
your Cell Phone to
your Headset

INSTRUCTIONS FOR USE

INSTALLATION

Simply plug the SafetyCell into your aircraft's standard headset and microphone jacks.

Next, plug your headset and cell phone into the SafetyCell.

In a matter of seconds, you will have simultaneous use of your cell phone AND your aircraft radio. At all times, you will hear the caller and radio transmissions.

ANSWERING PHONE CALLS

Answer phone calls as you normally would. When you reply to a cell phone call, simply talk into your headset microphone. No need to put your cell phone to your ear.

PLACING CALLS

Simply dial the number on your phone's dial pad. When your party answers, talk through your headset microphone. If you wish to talk over the radio, push your push-to-talk switch as usual.

In the event of radio failure, the SafetyCell provides an additional measure of safety for all pilots whether VFR or IFR.

The SafetyCell also aids pilots in: filing flight plans, getting IFR clearance at uncontrolled airstrips, arranging for a tie down, calling for a rental car, checking with the office, adjusting appointment schedules or simply confirming dinner plans with your spouse.

You can easily use a portable tape recorder in place of your cell phone and use it as a cockpit voice recorder and/or ATC instruction recorder.

Or, you can listen to your favorite music while still hearing all radio transmissions.

Always ready to go, the SafetyCell requires no batteries or power source. Stow in your flight bag and move it from plane to plane. You'll never be left stranded.

WARRANTY CARD

To register your purchase of the SafetyCell, and receive future updates and information, please complete this card and mail it to: Elite Solutions, Inc. 15455 Greenway/Hayden Loop Road, Suite C-20, Scottsdale, AZ 85260.

Some cellphones may require adapters to function properly. These are available locally at most electronics stores or on our website at www.pilotsupport.com

The FCC allows cell phone use within the cockpit while the plane is on the ground. ESI, by offering this product, does not promote the use of cell phones while in the air. If you choose to use your cellphone while you are in the air, you do so in violation of FCC rules and at your own risk.

Currently, the FAA has no position on cell phone use while either on the ground or in the air, however, it is the duty of the pilot in command to assure that any electronic device used within the plane does not conflict with the proper operation of the aircraft and its systems.
